A program for remote updating of USB licensing key (HASP-key)

The purpose of the program is to update USB licensing keys (HASP-key) which is already fixed for Tesseral product.
 User receives (use company's website www.tesseral-geo.com page Downloads) from Tesseral Technologies Inc. executable for key update **DogRemoteUpdate.exe.**

✓ Before using of this program you have to install corresponding drivers (use company's website www.tesseral-geo.com page Downloads) for USB licensing key. The new HASP drivers are strictly connected to the Windows (not computer!) bit number. You must install 32-bit drivers for 32-bit Windows on either 32- or 64-bit hardware. You can't mix 32- and 64-bit drivers.
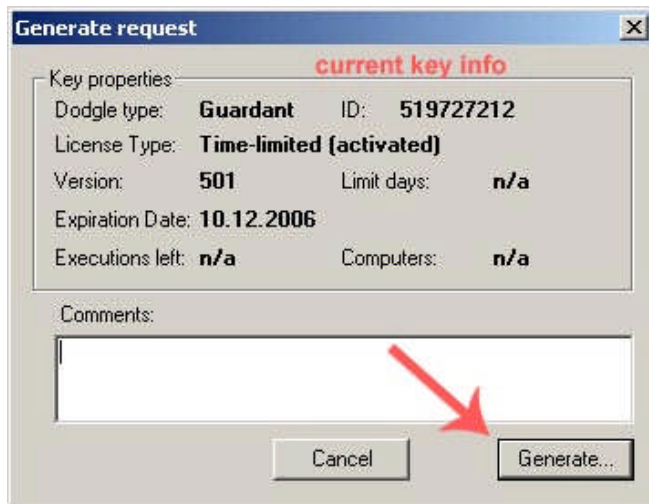

Using of this program is simple.

To generate request

1. Insert Tesseral HASP-key into USB slot (Provided you already have HASP-drivers installed. Drivers are installed automatically with *Tesseral 2-D USB Key* version).

2. Run **DogRemoteUpdate.exe**
3. Press **Insert Key –** if it is OK then in "Status" window is shown word "Success"
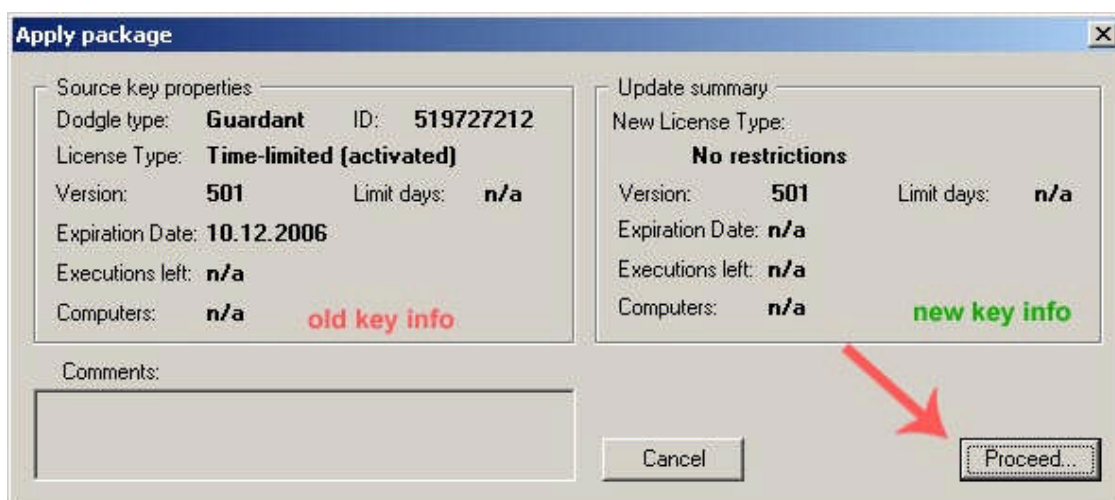

4. Press **Generate Request** button

To activate (update) USB licensing key

7. **Recieve a package file** *.pkg **from** Tesseral Technologies Inc.

8. **Run** DogRemoteUpdate.exe, then press **Insert Key**, Press **Load Package** button and select appropriate .pkg file.

9. Press **Apply**

Above procedure should be done for every HASP-key separately.

You can view present setting of your USB licensing key for Tesseral products using utility HaspView.exe (use company's website www.tesseral-geo.com page Downloads).
